# PUT RADON ON YOUR RADAR!

**RADON** is a gas given off when uranium deep underground breaks down. The radioactive gas travels up through the rocks and can collect everywhere in your lodge. It can also enter through well water. You can't touch, taste or smell radon, but long exposures to it might make you sick. Everyone should test for radon and take appropriate safety steps if it's a problem.

Color in the branches of the maze to stop the gasses from getting in the lodge.
